

Freedom of Information Request: 0421 2019/20

In order that prostate cancer cells/tumours show up on scan results, patients are injected with radiotracers about 40-60 minutes before a scan. Please could you provide me with the following information relating to NHS patients with *recurrent* prostate cancer at the hospitals:

How many NHS patients with *recurrent* prostate cancer (not in 'tracer' or scan trials) were injected with 'choline' prior to PET-CT scans, or had PET PSMA scans in the following date ranges, please?
